EDUCATION

M.E. Computer Science and Engineering 2026

Annamalai University
CGPA : 9.7

B.E. Computer Science and Engineering 2024

Anjalai Ammal Mahalingam
Engineering College
CGPA : 8.24

HSC standard 2020

New Bharath Matric. Hr. Sec.
School
Percentage : 72.1%

SSLC standard 2018

New Bharath Matric. Hr. Sec.
School
Percentage: 86.2%

AREA OF INTEREST

- Artificial Intellegent and Machine Learning
- programming (Python and web development)
- Database Management

ABOUT ME

I am a Computer Science graduate specializing in deep learning and quantum machine learning, with a real passion for solving complex technical problems. I'm looking for a collaborative team where I can apply my background in computer vision to build impactful real-world solutions, while continuing to learn and grow as a developer.

CERTIFICATION

- Python Zero to Hero - Guvi
- Data Analytics using Python - NPTEL by IIT Madras
- AI and ML (Summer Workshop) - IIT Madras

PROJECTS

Medicinal Plant Image Classification | B.E. Final Year Project

- Built and trained a deep learning pipeline utilizing the VGG16 convolutional neural network architecture for the accurate classification of medicinal plant images.
- Evaluated model accuracy, extracted relevant image features, and optimized hyperparameters to achieve robust predictive performance.

Flood Image Segmentation | M.E. 2nd Semester Mini Project

- Implemented a U-Net deep learning architecture to perform highly accurate semantic segmentation on aerial flood imagery.
- Processed and analyzed complex spatial data to effectively delineate flooded regions, demonstrating strong proficiency in advanced computer vision techniques.

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, C, SQL, JavaScript(React)
- **Cloud Computing:** AWS (S3, Braket)
- **Web Technologies:** HTML, CSS, Bootstrap

LANGUAGES KNOW

- Tamil
- English

PROJECTS

Hybrid Quantum-Classical Image Classification | M.E. Final Year Project

- Developed and deployed hybrid Quantum-Classical ML algorithms (QSVM, QCNN & Modified QKNN) for medical image classification, utilizing PyTorch for feature extraction and AWS Braket/IonQ for physical quantum execution
